Allowable Subject Matter

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The primary reasons for the allowance of the independent claims 1, 10 and 20 are the inclusion of the following limitation that is not found in the prior art and they are uniquely distinct features. The closest prior art is Minear et al (5,983,350). Minear discloses a method and a system for a secure network by regulating the flow of messages through a firewall with a network protocol stack and authenticating the sender of messages. Minear further discloses the implementation of IPSEC protocol for encryption and decryption of packets being transmitted between two firewalls. This art fails to anticipate or render the following limitations:

"Claim 1: negotiating and establishing a security association between the first network device and a third network device on a second network external to the first network, the second network device being positioned between the first network device and the third network device".

"Claim 10: sending the packet from the second network device to the first network device if the security value has been allocated to the first network device and the external address of the packet has been specified by the first network device as

valid, thereby confirming that a security association has been negotiated and established between the first network device and the third network device”.

“Claim 20: an established security association table associated with the routing network device for storing external addresses of external network devices that have negotiated and established security associations with internal network devices, and mapping external addresses that have been specified as valid by the internal network devices to one of internal network addresses and security values for established security associations”.

3. The dependent claims 2-9 and 11-19 are allowed because they were originally found to include a unique feature not found in the prior art.
